#### Making sense of marketing attribution

As the number, range, and type of marketing channels has evolved over the years so has the number of ways to measure marketing activity. Whilst each channel has its own method of understanding return on investment they rarely relate to an overall strategic understanding of the overall marketing mix. It is time to look at ways of unifying the tactical campaign reporting methods and get your single "sale" view.

Howard Thompson has spent the last 10 years supporting clients with a range of marketing, analytical and technological problems. Including marketing attribution and optimisation

### Introductions

Howard Thompson Director Fusion Analytics

interpret complex datasets

Making sense of marketing attribution

Agenda

Discuss why attribution is a complex problem

Explore different reporting methods for each channel/department

Review examples of where this works and where they struggle

Explore new methods and approaches with enhanced data capture

The customer journey includes more touch points than ever before. So, how to you assign a sale or revenue back to the cause...?

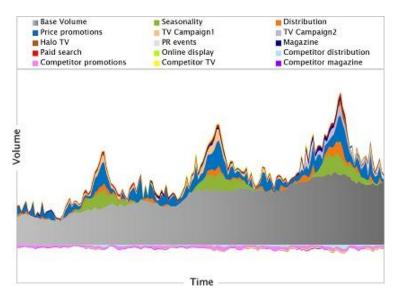

Fusion

#### Typically there are two ways to consider attribution: 'Micro' reporting 'Macro' modelling

A 'bottom up' calculation, looking at the known path to purchase to understand campaign performance within a channel

A 'Top down' view splitting spend amongst channels, to support overall strategy across many channels

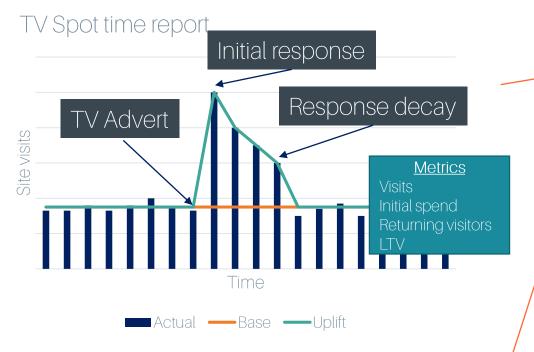

### Attribution approaches

Macro: Marketing Mix Vs Micro: Customer Journey Micro modelling demonstrates the performance of a channel, but leads to double counting revenue and miss-matched metrics:

## Micro tracking by source

*Each channel has its own 'micro' tracking method* 

*BUT they don't consider overlap* 

#### Facebook conversion tracking

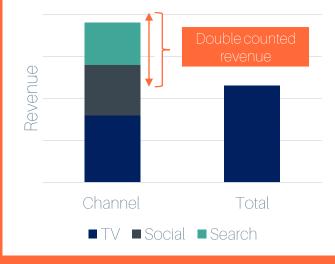

| Ad set name                        | Impressions | Reach | Results | Cost per results |
|------------------------------------|-------------|-------|---------|------------------|
| Campaign 4 - FB Page - Interests   | 27857       | 5002  | 1131    | 0.442087         |
| Campaign 3 - FB Page               | 28483       | 4958  | 1730    | 0.289017         |
| Campaign 3 - Interests             | 54723       | 33740 | 2380    | 0.136555         |
| Campaign 2 - FB Page               | 2174        | 1269  | 188     | 0.614787         |
| Campaign 1/2 - FB Page             | 4737        | 2222  | 375     | 0.273013         |
| Campaign 1/2 - FB Page - Interests | 4290        | 1904  | 376     | 0.271596         |
| Month 1 - FB Page                  | 1254        | 609   | 121     | 0.784628         |
| Campaign 1 - FB Page               | 3013        | 1018  | 303     | 0.704125         |
| Campaign 1 - Pixel                 | 929         | 313   | 22      | 0.712727         |

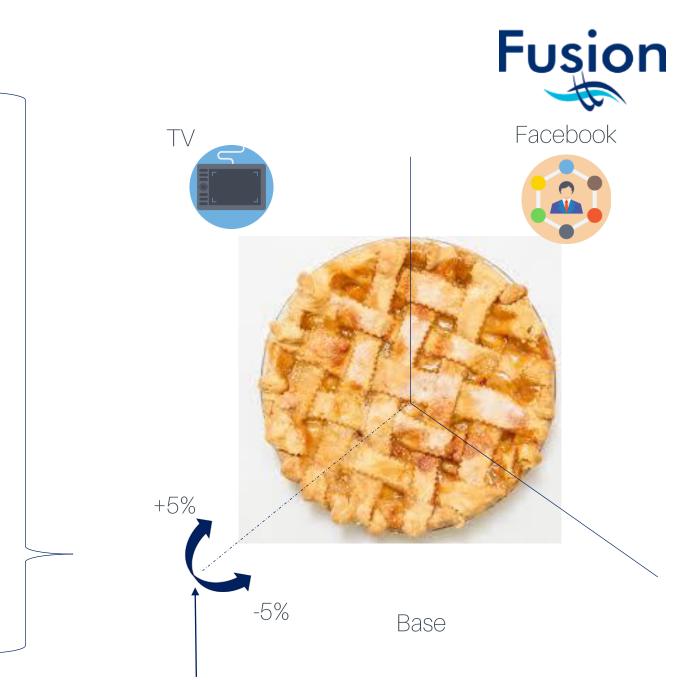

#### Web site click analytics

| Channel        | Users | New Users | Sessions |
|----------------|-------|-----------|----------|
| Social         | 5794  | 5663      | 6673     |
| Organic Search | 3080  | 3014      | 3864     |
| Direct         | 1699  | 1670      | 2420     |
| Referral       | 45    | 42        | 68       |
| Email          | 27    | 26        | 29       |
| (Other)        | 1     | 1         | 1        |
|                | 10646 | 10416     | 13055    |

Fusion

#### Channel revenue reports

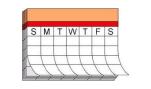

With fewer inputs we are more confident about where to draw the line

### Using Macro models to assign value

X% of FB is driven by TV

Weekly media spend

Seasonal affects

Competitor Activity

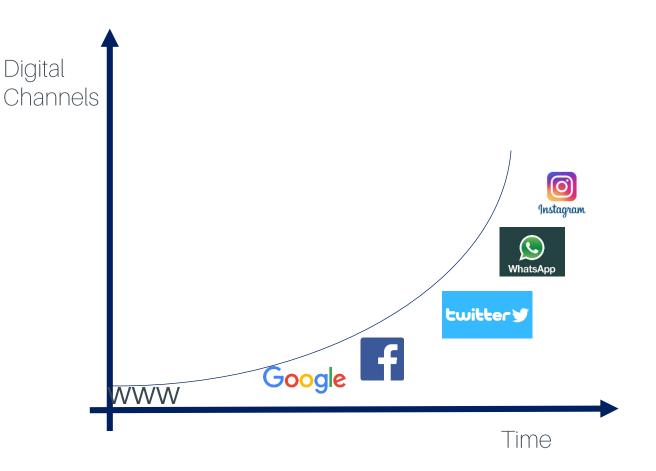

## "The Internet has been the most fundamental change during my lifetime and for hundreds of years"

Over time we are getting more digital channels....

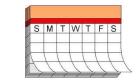

.... That means more overlap, more metrics and more complexity

Fusion

Traditional models struggle with the various datasets

*Nested models Neural networks Brand health & MORE ASSUMPTIONS* 

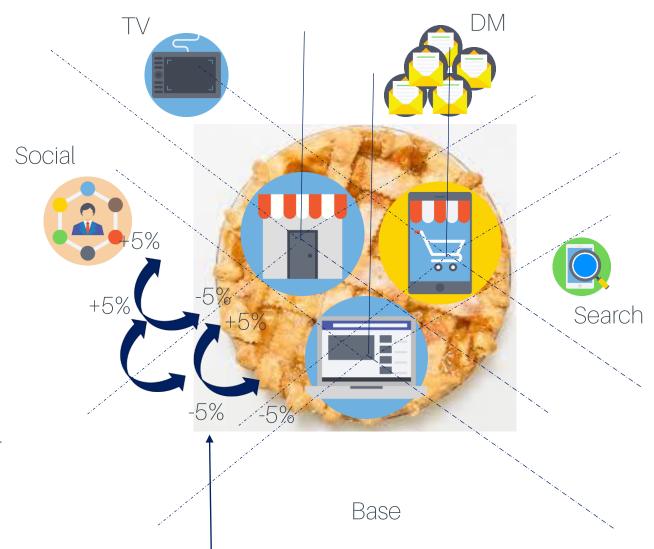

Seasonal affects

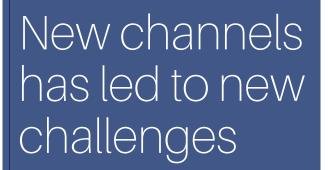

Competitor Activity

As we get more marketing channel inputs and more fulfilment channels it gets hard to see the picture

What do we need to overcome

### Our approach needs to:

Represent the customer journey

Resolve inter-channel complications

Provide a campaign level report

Also provide that strategic view

### "If you torture data long enough it will confess"

Ronald Coase Nobel prize in Economics 1991

### We don't need more models We need more data

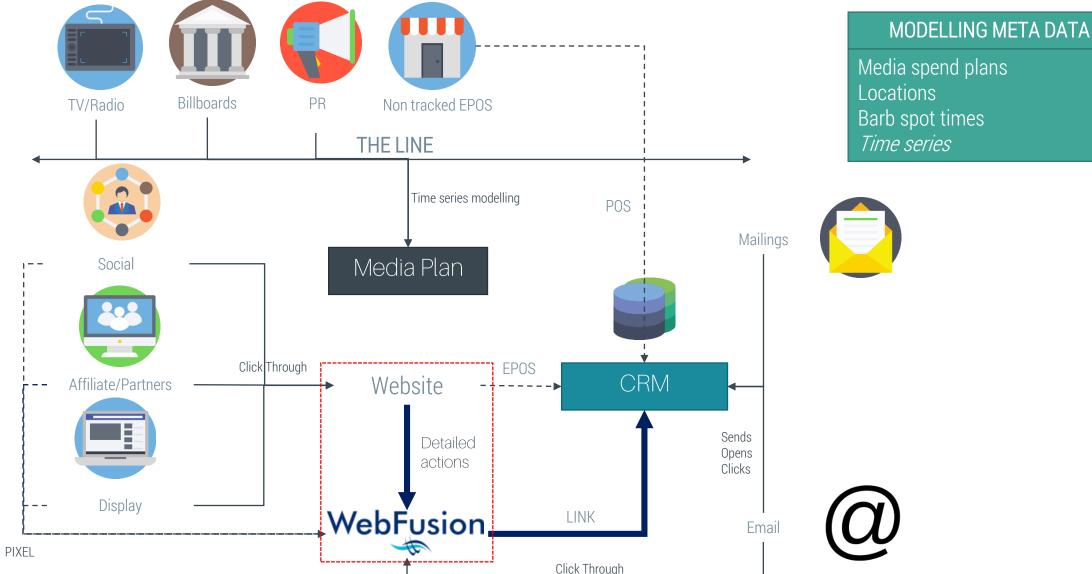

Fusion

### Capturing the right data with WebFusion

Going beyond "last" click to build the Single Customer View of Digital platforms

### Build a single customer journey view

### See all interaction points across all channels

|          |                |                 |       | TOUCHPOINTS  |      |        |     | COST  |         |      |        |     |               |                |
|----------|----------------|-----------------|-------|--------------|------|--------|-----|-------|---------|------|--------|-----|---------------|----------------|
| CUSTOMER | 1ST<br>CHANNEL | LAST<br>CHANNEL | EMAIL | %<br>BRANDED | MAIL | SOCIAL | PPC | EMAIL | BRANDED | MAIL | SOCIAL | PPC | TOTAL<br>COST | TOTAL<br>VALUE |
| John     | Mail           | EM              | 3     | 2            | 2    | 0      | 3   | 0.15  | 10      | 4    | 0      | 1.5 | 15.65         | 100            |
| Paul     | Web            | Web             | 4     | 1            | 0    | 1      | 8   | 0.2   | 5       | 0    | 0.5    | 4   | 9.7           | 500            |
| George   | Web            | Social          | 0     | 1            | 0    | 4      | 4   | 0     | 5       | 0    | 2      | 2   | 9             | 400            |
| Ringo    | Mail           | EM              | 2     | 0.5          | 5    | 1      | 2   | 0.1   | 2.5     | 10   | 1      | 1   | 14.6          | 0              |

We cannot rely on one channel to define attribution

We must consider all touch points and metrics together

This is a single digital view of all your browsers, customers and enquirers.

7min Understand Search channel ΤV Transactions interaction Direct Channel combination performance for the same spend PPC may drive traffic *Is PPC a fulfilment cost of TV* But TV & PPC may deliver the most value TV & PPC ΤV PPC  $\circ) ( \subset \mathbb{N}$ 💻 Visits 🛛 💻 Return 🛛 —— Spend Case Study Exponentia

TV needs PPC channels to "fulfil" the site visit or transaction (conversion):

### New digital metrics can be used to enhance all channel reports

Digital can provide 10 times the KPIs of traditional methods

| Email        |        |        |         |       |                     |              |                  |                     |
|--------------|--------|--------|---------|-------|---------------------|--------------|------------------|---------------------|

| Newsletter   | 100000 | 2%        | 800   | 25%          | URL/XYZ             | 80000        | 352000           | 4.4                 |

#### Press, Inserts, Door drops

| REGION | DATE TOTA | LORDERS | TOTAL VALUE | WEB VISITS | WEB VISTIORS | % CURRENT CUSTOMERS | NEW CUS. VALUE | EXISTING CUS. VALUE |
|--------|-----------|---------|-------------|------------|--------------|---------------------|----------------|---------------------|
| NE     | July      | 200     | 20000       | 180000     | 144000       | 20%                 | 14000          | 6000                |
| NW     | July      | 280     | 30000       | 240000     | 192000       | 15%                 | 16000          | 14000               |
| SOUTH  | Aug       | 600     | 50000       | 600000     | 480000       | 40%                 | 40000          | 10000               |

### Assess appropriate metrics

*How much engagement is driven by DM?* 

New integrated channels can be effective for some segments 🐼 However, uplift may not be clear or replicate for other segments over time

Consider channel saturation

Casual inference: *Does display/re-targeting* drive more sales?

### New tracking enabled the unification of reports

Our client was testing using a national email list provider vs a set of local providers.

Consolidate similar reporting systems

Understanding the performance of external data

Campaign 1: National Email list

> Campaign 2: Local Email list

The national campaign was sent to (cost) 10 times more than the local campaign:

|          |       | Website | Website  | Ave. Visits | Ave spend   | Total |
|----------|-------|---------|----------|-------------|-------------|-------|
| Campaign | Opens | Visits  | Visitors | per open    | per visitor | Value |
| 1        | 60500 | 950     | 850      | 2%          | 50          | 42500 |
| 2        | 6100  | 550     | 490      | 11%         | 50          | 24500 |

Yet it only yields twice the revenue.

Further more when we look at those that received both, we could see that half national revenue was generated by the local list:

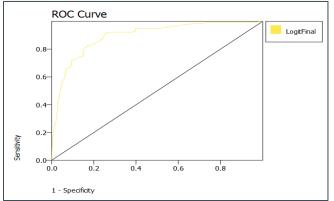

| ampaign (<br>1 | Campaign<br>2 | Opens | Website<br>Visits | Website<br>Visitors | Ave. Visits<br>per open | Ave spend<br>per visitor | Total<br>Value |
|----------------|---------------|-------|-------------------|---------------------|-------------------------|--------------------------|----------------|
| 1              | 1             | 5500  | 450               | 400                 | 10%                     | 50                       | 20000          |
| 1              | 0             | 55000 | 500               | 450                 | 1%                      | 50                       | 22500          |
| 0              | 1             | 600   | 100               | 90                  | 20%                     | 50                       | 4500           |

### Build hybrid Micro Marketing Mix Models

Use more granular data to build marketing mix models

WebFusion New data enables more granular marketing mix models. Using propensity modelling

Area Under Curve = 0.89

#### Channel engagement/uplift

| Variable       | Coefficient |
|----------------|-------------|
| Natural Search | 0.3         |
| Events         | 0.12        |
| Affiliate      | 1.17        |
| Paid Search    | 0.38        |
| DM             | 0.84        |
| Email          | 1.23        |

<u>Our Model</u>

| Channel               | Spend   | Incremental Value | Proportion of Value | ROI    |  |  |  |  |  |
|-----------------------|---------|-------------------|---------------------|--------|--|--|--|--|--|
| Natural Search/Direct | £2500   | £44,170           | 10%                 | £17.70 |  |  |  |  |  |
| Events                | £5000   | £30,760           | 7%                  | £6.20  |  |  |  |  |  |
| Affiliate             | £20,000 | £73,150           | 17%                 | £3.70  |  |  |  |  |  |
| Paid Search           | £5000   | £39,470           | 9%                  | £7.90  |  |  |  |  |  |
| DM                    | £10,000 | £64,880           | 15%                 | £6.50  |  |  |  |  |  |
| Email                 | £2500   | £46,120           | 11%                 | £18.40 |  |  |  |  |  |
| Base Spend            |         | £139,450          | 32%                 |        |  |  |  |  |  |
| Total                 | £45,000 | £438,000          | 100%                | £9.70  |  |  |  |  |  |
| GA Last Touch         |         |                   |                     |        |  |  |  |  |  |

| Channel               | Spend   | Incremental Value | Proportion of Value | ROI     |
|-----------------------|---------|-------------------|---------------------|---------|
| Natural Search/Direct | £2500   | £279,260          | 54%                 | £111.70 |
| Events                | £5000   | £                 | %                   |         |
| Affiliate             | £20,000 | £36,575           | 8.8%                | £1.83   |
| Paid Search           | £5000   | £76,045           | 17.5%               | £15.20  |
| DM                    | £10,000 | £                 | %                   |         |
| Email                 | £2500   | £46,120           | 11%                 | £18.40  |
| Base Spend            |         | £                 | %                   |         |
| Total                 | £45,000 | £438,000          | 100%                | £9.70   |

Or enhance existing models with more granular data

Case Study Coniak

Fusion

### Benefits of using a single digital data source

New data is the essential part to any approach you take

### 'Micro' methods

- See more response metrics
- Consider external factors
- Improve accuracy of results
- Understand one channel in the context of others
- Results integrate into 'macro' level results

### 'Macro' methods

- Explain smaller ROIs
- Explain the base spend
- Report at the customer segment level
- Understand the impact of a given campaign
- Reduce our modelling assumptions
- Results integrate into 'micro' level reporting

Making sense

of marketing

attribution

Each channel has its own 'micro' reporting approach

However this is not a fair view

Traditional 'Macro' modelling cannot cope in a digital world

The answer is more data, in a single source

This will enhance existing approaches and make way for new ones

Summary

### Thank you
